

ASPHALTENE DISPERSANT STICKS

NAME/PART NO.	SIZE	DESCRIPTION & USE
ASPHALTENE STICK White (Cardboard Tube)) ACL-7350	1 1/4X15	Keeps asphaltenes solublized (in suspension) & dispersed to avoid reflocculation (rejoining of particles) & reduces the size of particles. Works in Gas & Oil wells to thin/disperse Paraffin's. Allows contact between solvents and deposits even in the presence of water.
HYDRAFOAM SOAP STICK Green (Cardboard Tube)) ACL-7650	1 1/4 X 15	Primarily used to remove water from gas wells and increase gas production. The foaming action decreases the hydrostatic back-pressure which increases gas production that further enhances the foaming action until the well unloads. This stick also works well in wells with hydrocarbon content that may inhibit foam production by other sticks.
PARAFFIN INHIBITOR STICK Brown (Cardboard Tube)) ACL-8970	1 1/4 X 15	Oil-soluble sticks release paraffin inhibitor to reduce paraffin deposition from crude oil in production systems. Stick contains a combination of micro-crystalline wax & special crystal modifiers. The ingredients contribute to an effective inhibiting process on certain ranges of molecular weight paraffin's.
PARAFFIN INHIBITOR PELLETS Brown (Pail)) ACL-PIP	PELLETS	Oil-soluble pellets release paraffin inhibitor to reduce paraffin deposition from crude oil in production systems. Stick contains a combination of micro-crystalline wax & special crystal modifiers. The ingredients contribute to an effective inhibiting process on certain ranges of molecular weight paraffin's.
